

The background is a dark blue map with a network of light blue lines representing roads or paths. Two large, semi-transparent location pins are visible: one in the upper left and one in the lower right. A path of light blue lines connects the two pins, passing through the center of the image.

Nirvana

AI-Powered Disaster Relief Logistics

Transforming Disaster Response from Reactive Chaos to Predictive Precision.

The Golden Window is Being Wasted.

India faces escalating climate disasters, yet NGO relief heavily relies on reactive logistics. Supplies typically arrive *after* media peaks—often 72 hours too late.

- ⚠️ **Siloed Data:** Rich datasets exist but remain disconnected and unactionable.
- ⚠️ **"Gut-Feeling" Estimations:** Lack of precise forecasting leads to severe misallocation.
- ⚠️ **Broken Communications:** Central hubs lack visibility into localized ground realities.
- ⚠️ **Logistical Bottlenecks:** Unoptimized routing wastes time, fuel, and life-saving potential.

Enterprise-Grade **Intelligence.**

1. Ingest

Automated pipelines pull live meteorological data from IMD & NDMA directly into a secure PostgreSQL Data Warehouse.

2. Predict

Ensemble ML models (XGBoost/LightGBM) accurately forecast precise needs for food, water, medical, and shelter.

3. Optimize

Google OR-Tools solver resolves complex routing matrices to minimize transport costs and maximize human impact.

4. Execute

An intuitive Streamlit dashboard serves as the operational command center for NGO decision-makers and dispatchers.

Sustainable Impact via **B2B SaaS**.

Freemium Access

Basic risk maps, weather alerts, and district overviews provided freely to local grassroots organizations to build trust and network effects.

Enterprise Licensing

Advanced routing, private inventory integrations, and scenario simulators tailored for Tier-1 NGOs (Red Cross) and Government Authorities (SDMAs).

Measurable Value Add

Reduces logistical fuel and transportation costs by up to 30%, while significantly increasing transparency for organizational funders.

Scaling Resilience **Nationwide.**

Phase 2: Platform Scale

Secure, multi-tenant RBAC architecture for nationwide NGO warehouse onboarding.

Phase 1: Pilot

Coastal cyclone pilot in Odisha validating live API integrations and predictive accuracy.

Phase 3: Deep Tech

Expansion to Assam/Bihar floods, integrating real-time ISRO satellite inundation imagery.

"Stop reacting. Start predicting. Let's save lives, faster."
